## INTRODUCTION

The tables in this bulletin present an historical series of the United Kingdom's imports of selected agricultural products from all countries, also the amount and percentage imported from Canada. The statistics are basically those published in the annual Statement of the Trade of the United Kingdom, Volume II. The preliminary figures for the last year shown were taken from the Accounts Relating to Trade and Navigation of the United Kingdom, the December issue for that year, and are subject to revision when the annual Statement of Trade is published. The British units of measure have been converted to the customary units of measure used in Canada.

When the imports of certain items from Canada were very small, the quantities were credited in the United Kingdom trade accounts to "Other Commonwealth Countries", rather than listing the quantities imported from Canada separately. For these items the publication Trade of Canada "Exports" was checked to ascertain whether there were any shipments of these items to the United Kingdom. If the quantities were so small as to be less than half the unit shown or nil, a conventional sign was used.

### Conventional Signs

A blank space indicates that the information is not available, a dash (-) indicates nil and (0) less than half the unit shown at the top of the column.
